

The MoneyChip Instant Gamer Account

The MoneyChip™ Instant Gamer Account allows gaming companies to instantly verify and sell gaming services to players from around the world. Through our innovative Bluewire Network gaming can be facilitated instantly, with KYC and Jurisdiction validation, as well as instant billing without the expensive costs of micro payments via mobile providers and other instant payment mechanisms. Now you can capture revenue from customers safely and securely, and ensure the age and identification of the user through the same process.

How It Works

MoneyChip™ customers can sign-up for accounts online, funding the MoneyChip account through a variety of mechanisms including Credit and Debit cards. Each customer is validated for age and identity using the Bluewire technology to ensure we capture accurate customer information and can be 100% sure of identity and age.

Once a customer has signed up to MoneyChip™ they can elect to upgrade their account to an Instant Gamer Account at no extra fee. The MoneyChip™ Instant Gamer Account holder can now game using their account with any provider who accepts MoneyChip™. The process is simple, quick and gets the user gaming in seconds.

1. The User comes to the MoneyChip enabled site, and elects to begin gaming.
2. The site, whether online, or on a phone or other device requests the following information from the user:
 - a. Their MoneyChip™ Instant Gamer Account ID
 - b. Their MoneyChip™ Instant Gamer Account Key
 - c. The float amount with which they wish to play.
3. Having captured the information from the user, the gaming system requests from the Bluewire Network the customer information via an XML server connection.
4. The Bluewire Network places the users float amount into escrow pending the MoneyChip™ Mobile Secure authorisation code; A Message is sent via SMS to the users' elected number (chosen on account creation), confirming the Gaming Companies' identity and the float amount to be released for gaming, along with an authorisation code used to ensure the gamer is with their phone.
5. The Gaming system collects the SMS authorisation code from the user and passes it to the Bluewire system to confirm the signup process.
6. The Bluewire system releases the verified user information to the gaming system to complete the signup process, and authorises the funds for use by the gamer.
7. At the end of the gaming session, the net funds (difference between spend and winnings) is deducted from or credited to the gamer's account and any monies owed to or by the gaming service provider settled instantly.
